### Java - Kotlin

```
Java
                                POJO
                                                             Kotlin
public class Person {
                                        data class Person(val name: String)
  private String name;
  public Person(String name){
      this.name = name:
  public String getName() {
      return name;
  public void setName(String name) {
      this.name = name;
  // toString...
  // hashCode...
  // equals...
  //copy...
```

#### Java

```
final int x = // value;
final String xResult;
switch (x) {
       xResult = "0 or 11";
       xResult = "from 1 to 10";
       if (x < 12 & x > 14) {
           xResult = "not from 12 to 14"
       if (isOdd(x)) {
           xResult = "is odd";
       xResult = "otherwise"
final int y = //value;
final String yResult;
if(isNegative(y)) {
   yResult = "is zero";
} else if(isOdd(y)) {
   yResult = "is odd";
   yResult = "otherwise";
```

#### Kotlin

```
isNegative(y) -> "is negative"
isZero(v) -> "is zero"
```
